

WZR Ringing Tool

Product Information	
Description	WMC Part Ref
The WMC Ringing Tool	WZR

NOTES:

The WMC ringing tool is used to score a light groove in to the surface of the copper sheath to neatly stop the stripping action allowing the copper residue to break away cleanly, leaving a neat end.
Tighten the wing nut until the wheels have enough grip so that the tool is supported in a horizontal position.
Rotate the ringing tool for one complete turn or more if groove is too shallow on the first rotation.
The WMC ringing tool can be used on the complete range of Mineral Cable.
The ringing tool is used in conjunction with a WMC cable stripper.
